

Journey Map Seed

This document is a starter artifact for grouping normalized stories into prototype journeys.

It is intentionally lightweight and editable. The goal is to create a practical planning layer above `canonical_persona`, not to lock the team into a final process model too early.

Why This Layer Exists

- `canonical_persona` tells us who primarily owns a story.
- `persona_family` lets us roll multiple roles into one planning lane.
- `journey_family` gives us the larger operational area or value stream.
- `journey` gives us the specific narrative thread or prototype scenario where a story belongs.
- `stage` helps us place stories in a sequence that feels like a realistic day, workflow, or cross-team handoff.

This makes it easier to:

- storyboard the prototype
- define swimlanes by persona
- identify gaps and overlaps
- decide what should be demoed together

Definitions

- `journey_family`: A broad operating area or value stream that contains multiple related journeys.
- `journey`: A specific end-to-end scenario with a recognizable start, end, and user value outcome.
- `stage`: A meaningful step inside a journey.
- `canonical_persona`: The primary lane owner for a story within that stage.

A working journey should usually have:

- one clear triggering intent
- a recognizable beginning and end
- a scope small enough to storyboard or demo coherently
- one dominant actor plus explicit handoffs where needed

Working Model

Use this hierarchy:

1. `journey_family`
2. `journey`
3. `stage`
4. `canonical_persona`
5. `story_id`

A story can appear in more than one journey when needed, but it should usually have one primary home.

Markdown Template

Use this template for future journey docs:

```
## Journey Family: <family title>

### Purpose
<one or two sentences on the broader value stream or operating area>

### Candidate Journeys
- <journey 1>
- <journey 2>

## Journey: <journey title>

### Purpose
<one or two sentences on what user value or operational outcome this
journey represents>

### Stages
- <stage 1>
- <stage 2>
- <stage 3>

### Swimlanes

| Canonical Persona | Stage | Story IDs | Notes |
|---|---|---|---|
| <persona> | <stage> | <#123, #124> | <optional note> |
```

Seeded Journey Families and Journeys

These are suggested first-pass journey groupings seeded from:

- local story titles
- local canonical_persona metadata
- the persona taxonomy in personas.md

Journey 1: Customer Intake to Estimate

Purpose

This journey covers the customer-facing path from initial context lookup through estimate authoring, review, approval, and promotion toward execution.

Stages

- Customer context and intake
- Quote and estimate authoring
- Review and approval

- Promotion to work order

Swimlanes

Canonical Persona	Stage	Story IDs	Notes
Service Advisor	Customer context and intake	#68, #79, #163, #239	Dominant lane for CRM snapshot, draft estimate creation, and estimate retrieval.
Customer Support Associate	Customer context and intake	#67, #85	Front-counter and checkout-adjacent intake behaviors.
Service Advisor	Quote and estimate authoring	#80, #84, #112, #234, #235, #236, #237, #238	Authoring, pricing, taxes, product context, and estimate revision.
Service Advisor	Review and approval	#232, #233, #269, #270, #271	Submission, revision effects, and approval handling.
Location Manager	Review and approval	#268	Expiration and higher-authority approval behavior.
Service Advisor	Promotion to work order	#227, #228, #229, #230, #231	Promotion flows, idempotency, and work order creation from approved scope.
Location Manager	Promotion to work order	#226	Promotion audit visibility and management oversight.

Journey 2: Scheduling, Dispatch, and Shop Coordination

Purpose

This journey covers planning and coordination work that places vehicles, technicians, bays, and appointments into an executable operational schedule.

Stages

- Appointment creation
- Schedule management
- Assignment and coordination
- Work visibility

Swimlanes

Canonical Persona	Stage	Story IDs	Notes
Service Advisor	Appointment creation	#74, #139	Customer-linked appointment creation and assignment visibility.

Canonical Persona	Stage	Story IDs	Notes
Dispatcher	Appointment creation	#76	Dispatcher-owned scheduling entry point.
Dispatcher	Schedule management	#131, #137, #138	Mobile dispatch and schedule manipulation.
Location Manager	Assignment and coordination	#128, #133, #225	Assignment context, overrides, and technician assignment decisions.
Dispatcher	Assignment and coordination	#225	Shares assignment ownership with shop/location leadership.
Customer Support Associate	Work visibility	#78	Customer-facing or front-counter visibility into active work.
Service Advisor	Work visibility	#77	Invoice/finalization awareness while work is in progress.

Journey 3: Work Order Execution and Completion

Purpose

This journey covers the technician-facing execution loop plus the service-advisor and management actions that close work and hand it off to billing.

Stages

- Execution context
- In-progress execution updates
- Parts handling during execution
- Completion and billing handoff

Swimlanes

Canonical Persona	Stage	Story IDs	Notes
Technician	Execution context	#123, #219	Technician-facing work context and field visibility.
Technician	In-progress execution updates	#220, #224	Additional work requests, start work, and in-progress reasons.
Technician	Parts handling during execution	#221, #222, #243	Substitutions, returns, issue/consume, and picked-item consumption.

Canonical Persona	Stage	Story IDs	Notes
Parts Manager	Parts handling during execution	#93	Inventory view from work order lines and parts-centric operational decisions.
Service Advisor	Completion and billing handoff	#215, #216, #217	Completion, finalize-for-billing, and approval-gated change resolution.
Location Manager	Completion and billing handoff	#214	Controlled reopen and post-completion management workflow.

Journey Family 4: Inventory, Warehouse, and Fulfillment

Purpose

This is better treated as a journey family than a single journey. It spans planning, warehouse-floor movement, fulfillment, and returns, which are related but not one clean narrative.

Candidate Journeys

- Cycle count planning to approval
- Receiving to putaway
- Pick fulfillment to execution issue
- Return unused parts to stock

Family Overview

Candidate Journey	Dominant Personas	Story IDs	Notes
Cycle count planning to approval	Inventory Control Manager	#90, #91, #97, #104	Count governance and topology/control work fit one managerial journey.
Receiving to putaway	Warehouse Associate, Inventory Control Manager	#94, #95, #96, #98, #99, #241	Physical receipt and placement form a stronger end-to-end warehouse journey.
Pick fulfillment to execution issue	Dispatcher, Parts Manager, Technician	#92, #93, #243, #244	This is the execution-support branch of the family.
Return unused parts to stock	Warehouse Manager, Technician	#242	Small but valid reverse-flow journey.

Journey Family 5: Billing, Accounting, and Finance

Purpose

This is a journey family, not a single journey. It mixes front-counter checkout, AR operations, accounting support, and finance governance, which are distinct user stories with different rhythms and actors.

Candidate Journeys

- Checkout to payment completion
- Invoice issuance to AR application
- Accounting event triage to journal resolution
- Period close and finance review

Family Overview

Candidate Journey	Dominant Personas	Story IDs	Notes
Checkout to payment completion	Customer Support Associate, Location Manager	#67, #69, #70, #71, #72, #73	Clean counter-facing journey with a clear customer and cashier endpoint.
Invoice issuance to AR application	Service Advisor, Accounting Associate, Location Manager	#177, #178, #179, #180, #209, #210, #211, #212	Operational billing and receivables journey.
Accounting event triage to journal resolution	Accounting Associate	#181, #186, #190, #200, #201, #205, #206	Back-office accounting operations journey.
Period close and finance review	Accounting Manager, Controller, Finance Manager	#188, #189, #191, #198, #199, #202, #203, #204	Better framed as a management journey cluster than as part of checkout.

Journey: Checkout to Payment Completion

Purpose

This journey covers the front-counter path from invoice-ready work through payment collection, refund or void exceptions, and customer-facing closeout.

Stages

- Checkout and payment
- Exception handling
- Closeout confirmation

Swimlanes

Canonical Persona	Stage	Story IDs	Notes
Customer Support Associate	Checkout and payment	#67, #69, #70, #71, #73	Front-counter payment and status visibility behaviors.
Location Manager	Exception handling	#72, #210	Manager-controlled voids, refunds, and invoice adjustments.
Accounting Associate	Exception handling	#179, #180, #211	Refund handling, AR application, and invoice traceability support.
Service Advisor	Closeout confirmation	#212	Draft invoice calculation and totals confidence before final customer handoff.

Journey Family 6: Product, Pricing, and Promotions Governance

Purpose

This area is also better treated as a journey family. Product administration, pricing governance, and promotions management share data, but they are not one end-to-end day-in-the-life flow.

Candidate Journeys

- Product setup and maintenance
- Price book and rule governance
- Promotion design to redemption support

Family Overview

Candidate Journey	Dominant Personas	Story IDs	Notes
Product setup and maintenance	Product Administrator, Inventory Staff	#108, #109, #119, #120, #121	Data stewardship and product maintenance.
Price book and rule governance	Pricing Administrator, Pricing Analyst, Service Advisor	#107, #117, #118, #159, #160, #167	Governance plus downstream visibility in customer-facing quoting.
Promotion design to redemption support	Account Manager, Customer Support Associate	#158, #161	Lightweight cross-functional promo lifecycle.

Journey: Price Book and Rule Governance

Purpose

This journey covers how pricing administrators and analysts define pricing scope, rules, and eligibility so that customer-facing teams can quote and apply pricing correctly.

Stages

- Scope and visibility
- Pricing configuration
- Downstream quote application

Swimlanes

Canonical Persona	Stage	Story IDs	Notes
Pricing Administrator	Scope and visibility	#117	Pricing-scope location visibility and sync oversight.
Pricing Analyst	Pricing configuration	#118, #160, #167	Price book rules, eligibility, and pricing governance.
Service Advisor	Downstream quote application	#107, #159	Restriction visibility and promotion application in customer-facing flows.

Journey 7: Party, CRM, and Account Management

Purpose

This journey covers customer and account record creation, association, and stewardship outside of the immediate estimate-building flow.

Stages

- Person and account creation
- Account relationship management
- Record stewardship

Swimlanes

Canonical Persona	Stage	Story IDs	Notes
Customer Support Associate	Person and account creation	#175	Individual person creation in customer-facing workflows.
Account Manager	Person and account creation	#176	Commercial account creation.
Account Manager	Account relationship management	#174	Associate individuals to commercial accounts.

Canonical Persona	Stage	Story IDs	Notes
System Administrator	Record stewardship	#173	Duplicate party search and merge.

Journey 8: Security, Administration, and Platform Operations

Purpose

This journey covers access control, security oversight, integration support, platform configuration, and non-customer-facing operational tooling.

Stages

- Security administration
- Audit and compliance
- Platform and integration support

Swimlanes

Canonical Persona	Stage	Story IDs	Notes
System Administrator	Security administration	#66, #87	Role matrix and admin security configuration.
Auditor	Audit and compliance	#65	Financial exception audit trails.
Compliance Auditor	Audit and compliance	#86	Security and movement audit visibility.
Integration Support Engineer	Platform and integration support	#156, #157	Operational support and inbound processing diagnostics.
Platform Engineer	Platform and integration support	#207	Ingestion tooling and producer validation support.
Domain Architect	Platform and integration support	#208	Canonical event envelope contract.
Moqui Engineer	Platform and integration support	#280	Signed assertion issuance and frontend platform integration.

Journey 9: People, Timekeeping, and Labor Flow

Purpose

This journey covers labor tracking, mobile work timing, time approval, and accounting/payroll handoff from worked time.

Stages

- Work start and timing
- Time approval and exception handling
- Export and downstream handoff

Swimlanes

Canonical Persona	Stage	Story IDs	Notes
Technician	Work start and timing	#132, #145, #146, #147	Start/stop work, mobile timers, and labor submission.
Dispatcher	Time approval and exception handling	#131	Mobile travel-time coordination.
Location Manager	Time approval and exception handling	#130, #144	Time approval and discrepancy reporting.
Accounting Associate	Export and downstream handoff	#143	Approved time export for payroll and accounting.

Suggested Next Pass

1. Choose one `journey_family` and one child `journey` as the prototype spine for the next demo.
2. Split the remaining broad families into similarly scoped child journeys before adding more swimlane detail.
3. Add `primary_journey_family`, `primary_journey`, and `primary_stage` beside `canonical_persona` in story metadata.
4. Decide which stories are truly cross-journey and which should have a single canonical home.
5. If desired, add a Mermaid diagram per journey after the markdown structure feels stable.
